**BEFORE
LEAFREE**

**LeaFree is a hooded
aluminum gutter cover
designed to keep
leaves and debris out
of your gutter, ensuring
they stay clog-free.**

1 Debris and leaves either slide off the surface or dry up and get blown away.

2 The nose-forward cover extends beyond the gutter lip, allowing water to follow the hood curve and flow into the gutter, effectively washing away leaves and debris.

3 LeaFree works on the scientific principle of water adhesion, where water sticks to other substances. In this case, it is the nose-forward hood of LeaFree.

4 The flex-bend slows water flow and directs some roof runoff through the vertical perforations.

5 Regardless of your roof pitch, LeaFree efficiently manages water intake and directs it through your gutters.

6 LeaFree does not install with additional hangers or brackets that can move or shift over time.

7 Even during the heaviest rainstorms, water flows through LeaFree into the gutter, out through the downspouts, and away from your home.

LeaFree meets Class A fire performance under recognized ASTM standards, which aligns with WUI requirements adopted by state and local building codes.

LeaFree is designed for homeowners who want the ultimate protection for their home.

Reliable Protection

LeaFree can handle any rainfall amount. The patent-pending design allows water to flow into the gutter while keeping leaves and debris out.

Interlocking Panels

LeaFree screws directly into the gutter lip, and the panels interlock and slide horizontally into place as they are installed. There are no screws in your roof or fascia.

Nose-Forward Cover

LeaFree's nose-forward design extends beyond the gutter lip, allowing water to follow the hood curve and flow into the gutter, all while handling the heaviest of rains and keeping debris out.

Inside Miters

The pre-made inside miters, featuring a built-in water diverter and splash guard, work seamlessly with LeaFree regular or high-flow panels. They are available in matching colors with your LeaFree panels and gutters.

Regular Panels

LeaFree regular panels provide gutter protection for a variety of applications, offering a sleek, streamlined appearance. Their low-profile design enhances the look of your home by blending the gutters with the shingles and concealing unsightly metal flashing. This will increase the curb appeal and overall value of your home.

Made of 0.024 Aluminum | Panels are 4' long | Fits 5", 6", & 7" gutters

High-Flow Panels

LeaFree High-Flow is perfect for areas with concentrated water flow. It is engineered to manage rainwater on high-flow surfaces such as metal roofs, steep roofs, and roof valleys. The pill-shaped vents enable concentrated water streams to enter the gutters while preventing leaves and debris from getting in.
